

Corporate Wallet Digital Twin

See the wallet. Size the gap. Choose the conversation.

$$A = q \times T$$

observed

share

total wallet

COMMERCIAL ANSWER

Syn Bank activity plus approved public anchors and governed priors estimate total-wallet and share intervals; a target-share scenario sizes the contestable gap; the Decision Twin turns it into a governed RM conversation.

DECISION TWIN ACTION

Eight discovery conversations

Wallet gap → stakeholder role → business problem → solution bundle → 30/60/90-day timing → highest-positive-net-VOI question.

PERMITTED NOW

Validate wallet, stakeholder and feasibility.

Conditional product action only after missing facts and required gates are confirmed.

GROUNDED GENAI PROOF

Closed pack → Why / How / What

Numbers, signs, currencies, citations, rank and graph path stay deterministic. Provider failure always returns the deterministic brief.

9 COMPARATIVE TARGET RUNS · 0 EXECUTED

Fresh rotated credentials and explicit acknowledgement are required; access failure is not presented as success.

WHAT THE SENSITIVITY SAYS

Trade Finance: first-ranked in 100% of 10,000 draws

Not a release condition; E1 weight sensitivity changes its top-10 share.

LIMITATION — REHEARSAL CAN NEVER AUTHORIZE BANK USE

The 51 pending facts stay excluded. No E3 panel, approved bank economics, bank infrastructure, RM pilot or randomized outcome history exists. BANK_SHADOW_AUTHORIZED remains FALSE; measured share and causal value stay disabled.

PROMOTION READINESS TWIN

PMR 100% · BER 0% · 30 virtual / 0 bank days
