

Corporate Wallet Digital Twin

A = q × T

observed share total wallet

See the wallet. Size the gap. Choose the conversation.

COMMERCIAL ANSWER

Syn Bank activity plus approved public anchors and governed priors estimate total-wallet and share intervals; a target-share scenario sizes the contestable gap; the Decision Twin turns it into a governed RM conversation.

DECISION TWIN ACTION

Eight discovery conversations

Wallet gap → stakeholder role → business problem → solution bundle → 30/60/90-day timing → highest-positive-net-VOI question.

PERMITTED NOW

Validate wallet, stakeholder and feasibility.

Conditional product action only after missing facts and required gates are confirmed.

GROUNDED GENAI PROOF

Closed pack → Why / How / What

Numbers, signs, currencies, citations, rank and graph path stay deterministic. Provider failure always returns the deterministic brief.

9 COMPARATIVE TARGET RUNS · 0 EXECUTED

Fresh rotated credentials and explicit acknowledgement are required; access failure is not presented as success.

WHAT THE SENSITIVITY SAYS

Trade Finance is first-ranked in 100% of 10,000 global draws; portfolio dominance is not universal.

E1 weight 0.20 / 0.35 / 0.50: known-truth coverage 88.8% / 88.0% / 86.8%; top-10 TF share 70% / 60% / 30%; majority 1 / 1 / 0.

LIMITATION — SUBMISSION GATES ARE DISTINCT FROM BANK PRODUCTION

The 51 pending facts remain excluded. No E3 multibank panel, approved bank pricing/FTP/capital inputs, bank cloud/identity controls, live-provider adjudication, RM pilot or randomized outcome history exists. Therefore bank status remains NOT_PROMOTABLE; no measured competitor share or causal uplift is claimed.
